1. The chemical plant¹ at Pét (4709N 1807E) is producing a special aviation gasoline, using the so-called cracking or pyrogenation process. The daily capacity is estimated at about 160 tons.
2. This is a type of synthetic gasoline which is derived from coal from the Várpalota and Ajka mines. The essential elements for the manufacture of the gasoline itself come from the Láspe and from the Almásfüzitő refineries.
3. The abovementioned plant is the only one of its kind in Hungary to produce synthetic gasoline.

Comment: Source is presumably referring to the Nitrogen Works of Pét (Péti Nitrogénművek).
